- AM — Small web text inside the app

× Remove

- AM — Colors with no meaning
- EM — Leaving for an external site without warning
- AM — Finding out a service is closed only after entering

State procedures list

Espacio Mayor · Direct · Design reference

v0.0.48 · October 3, 2026 · Android

The good

1. Large cards with an image, bold title and short description; the ChileAtiende logo shows where the procedure comes from.

2. Bottom bar with icons and text, active item in orange, and a "Back" button with an arrow and text: you always know where you are.

3. Favorites with a heart on every card, to get back quickly to what matters.

Team screenshots with the installed app (v0.0.48).

Home

ClaveÚnica sign-in (external site)

Espacio Mayor · Direct · Design reference

v0.0.48 · October 3, 2026 · Android

The bad

1. Titles cut off with ellipses ("Registro Social de H…", "Aprende sobre tecnol…").
   Heuristic: recognition rather than recall

2. The procedure is handed off to an external site that asks for the RUN and ClaveÚnica without prior warning. Without a ClaveÚnica the flow ends there.
   Heuristic: help and documentation; visibility of system status

Team screenshots with the installed app (v0.0.48).

Chile Atiende modal

Home screen

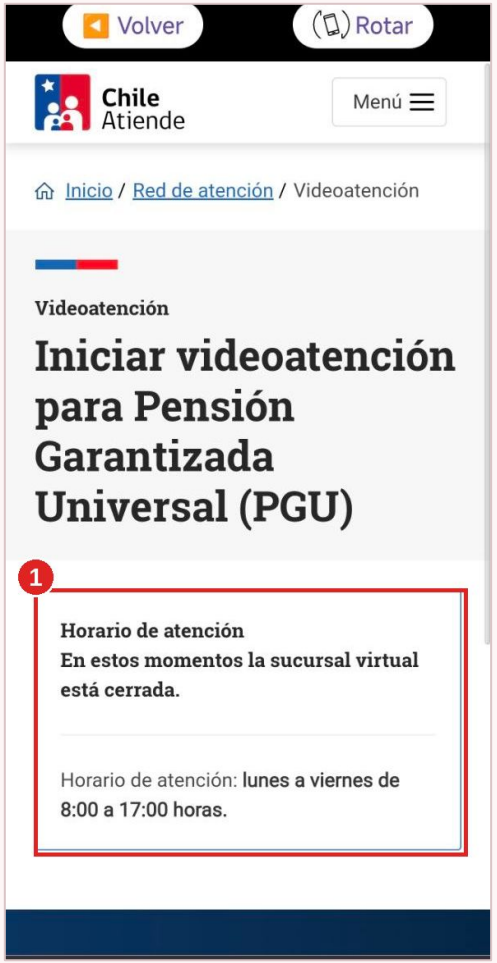

App Mayor · Complementary

v2.2.9 · October 3, 2026 · Android

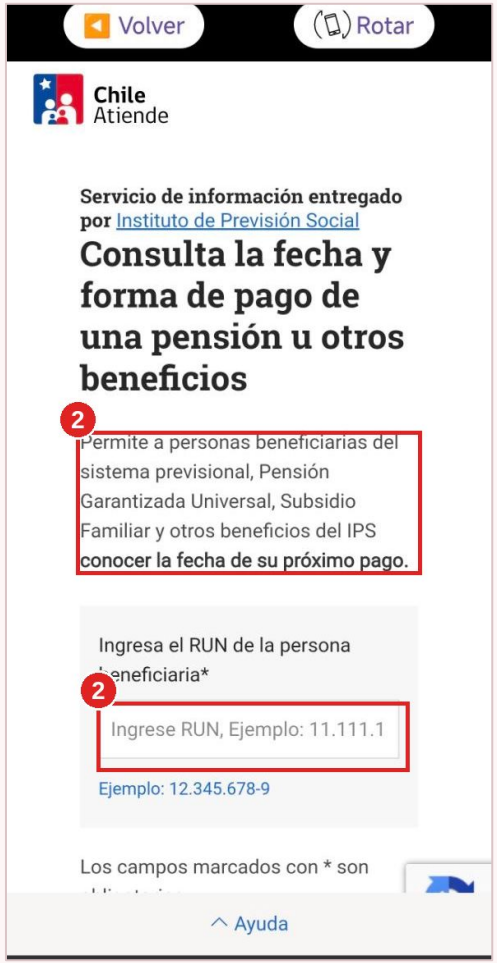

The good

1. Modal with three large, explicitly named actions (pension payment, request the PGU by video call, and call) plus a clear "Close" button.
2. A call to 101 in a single tap, without going through the web: the shortest path to human help among the three tools.
3. Navigation with labels and position: large "Back" and "Next" buttons and a "Screen 3" indicator.

Team screenshots with the installed app (October 3, 2026).

Video call

Pension payment lookup

Home screen

App Mayor · Complementary

v2.2.9 · October 3, 2026 · Android

The bad

1. The video call may be closed and you only find out after entering (Monday to Friday, 8:00 to 17:00); the modal gives no warning.

   Heuristic: visibility of system status; error prevention

2. Scale mismatch: huge buttons in the app, but the website inside it uses small text and fields.

   Heuristic: consistency and standards

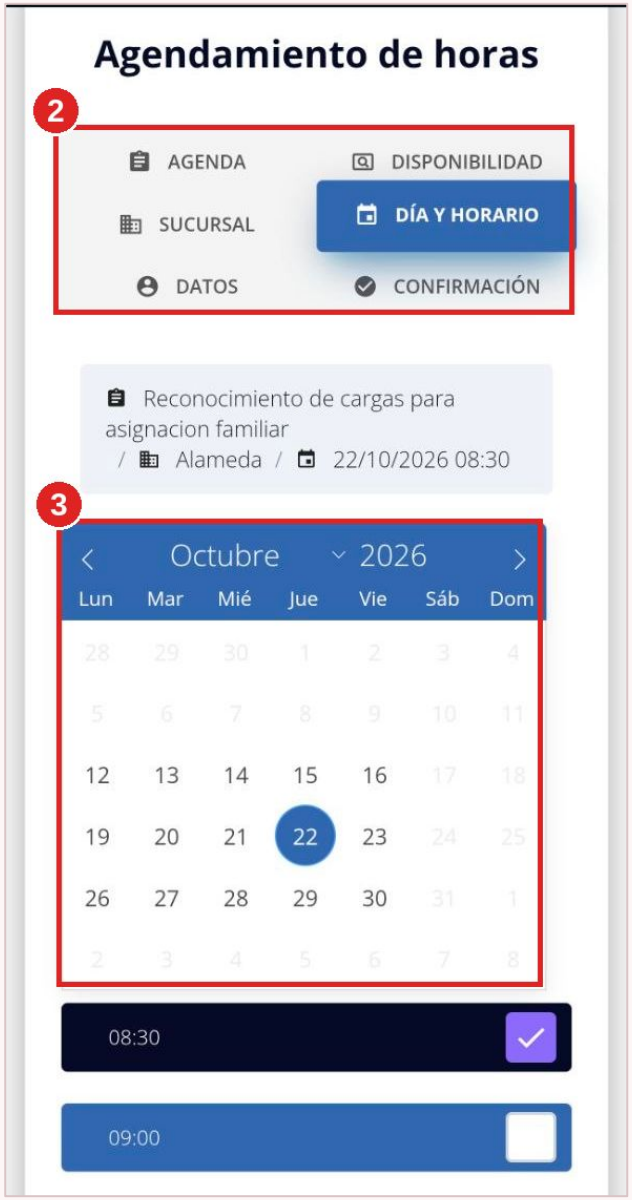

3. Colors with no consistent meaning: "Correo" (mail) and "Solicita la PGU" share the red.

   Heuristic: consistency and standards; error prevention

Team screenshots with the installed app (October 3, 2026).

Menu: Service network

Booking: date and time

ChileAtiende · Analogous

Mobile web · October 3, 2026

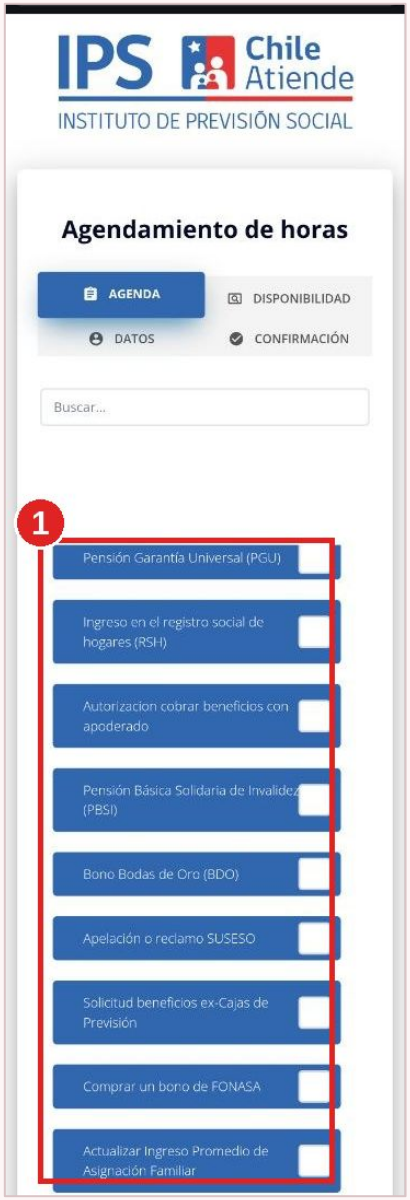

The good

1. "Red de atención" menu split into in-person and remote, with video call and Call Center 101 next to the branches.

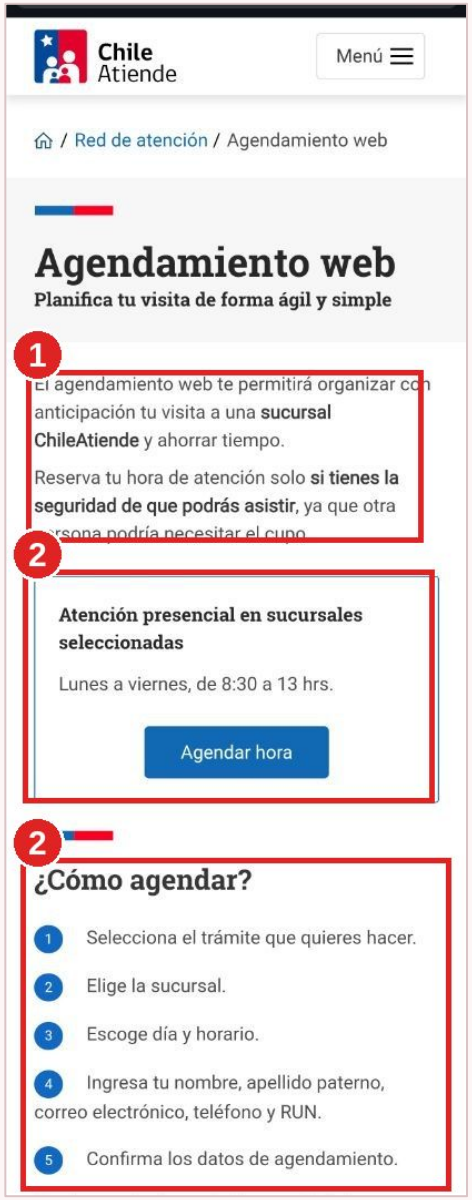

2. Step indicator when booking, with the current step highlighted.
   Heuristic: visibility of system status

3. Calendar that disables unavailable days and large Back and Next buttons; the final step summarizes the data before confirming.
   Heuristic: error prevention

Team screenshots of the mobile website (October 3, 2026). Form data is fictitious.

Procedure selection

Web booking

Data confirmation

ChileAtiende · Analogous

Mobile web · October 3, 2026

The bad

1. Very small text in the instructions and the procedure list; the contrast of white text on blue should be measured.
   Heuristic: minimalist design; accessibility

2. Many steps to reach booking (menu, service network, book your appointment, web booking, book) and the flow changes subdomain and branding.
   Heuristic: user control and freedom; consistency

3. Requires reCAPTCHA and personal data with no visible contextual help.
   Heuristic: help and documentation

Team screenshots of the mobile website (October 3, 2026). Form data is fictitious.
