Value Proposition Canvas

VALUE PROPOSITION

Offer peace of mind through clear, recorded confirmations that errands have been resolved

GAIN CREATORS

What gains does the product create for your users? How substantial or insignificant are they? How and when do they occur?

Matching with a verified facilitator or volunteer, based on the errand and their availability

Complete the errand on their own, with guided assistance

Resolve the errand in a single accompanied session, without depending on a relative.

State the errand and when they are available

Integrated scheduling (date, time and place of the meeting)

PRODUCTS & SERVICES

Which features of your product help the user complete their desired tasks?

Traceability log to verify and mark the status of the errand

Registration with a verified profile for older adults, facilitators and volunteers

Reduced dependence on relatives

Simple, accessible interface with large text, short steps and no long forms

PAIN RELIEVERS

How does the product relieve your users' pains? How does it eliminate or reduce negative emotions, undesirable situations and risks they want to avoid?

Elimination of the risk of data theft by structuring the service as safe, in-person “guided assistance”

Trusted environment that verifies profiles and limits the support network to known people

CUSTOMER SEGMENT

Be confident that the errand has been completed

Receive help from a trusted person

Choose a time that is convenient for both

Keep control of their passwords and personal data

GAINS

What benefits do your users expect, desire, or would be surprised by? These can be social status, positive emotions or cost savings.

Avoid having to ask their family for favors

Find a trusted person to accompany them

Feel safe and keep their independence

Coordinate a day and time that suit them

Know whether the errand has been resolved

CUSTOMER JOBS

What exactly are your users trying to accomplish? Which tasks, problems or needs are they trying to resolve?

Book a medical appointment online

Risk and insecurity when exposing sensitive data or passwords to a stranger

Informal coordination that gets lost: missed appointments and postponed care

Complete other everyday errands that have moved to digital channels

PAINS

What negative emotions, undesirable situations and risks are your users experiencing or trying to avoid?

Uncertainty about whether the errand was completed

Constant dependence on relatives being available

Fear of making a mistake or being scammed online

Feeling like a burden to their family
